

Overview

Occasionally, you will need to assign extra credit to students. You may have an Optional Assignment or may want to provide students an opportunity to improve their grade. You can look at giving **Extra Credit** for the entire course or one specific grade item.

How to Give Extra Credit for an Entire Gradebook

In this scenario, you want to give an extra credit assessment for entire course. You have five assignments worth 20% each.

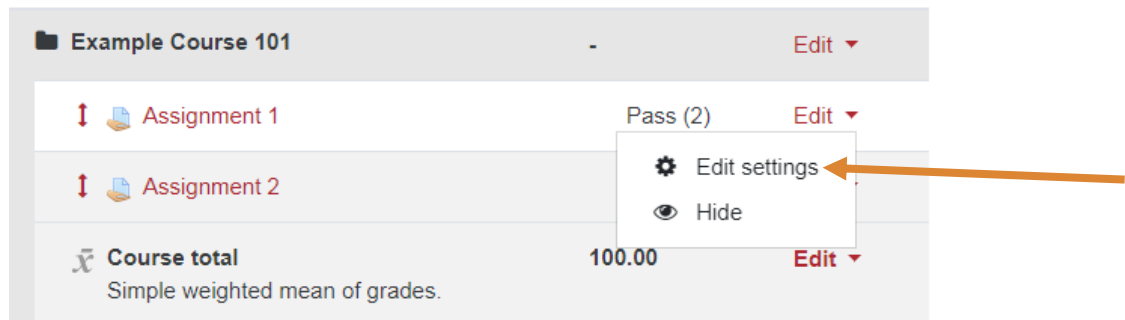

Regular Assignments:

Assignment 1	20 or .2
Assignment 2	20 or .2
Assignment 3	20 or .2
Assignment 4	20 or .2
Assignment 5	20 or .2
Total	100%

1. Create a new assessment on the front page of Moodle or add a grade item for assessments outside the Moodle platform.
2. Go to **Gradebook Setup**
3. To use this feature, you must use **Simple Weighted Mean of Grades** or **Mean of Grades** (with Extra Credit). Go to your course name at the top of your gradebook setup page and select **Edit**. Change the **Aggregation**.

4. Locate the item to be marked extra credit. Under the Actions column in that row, click Edit Settings.

5. Check the **Extra credit checkbox**. Remember the maximum grade of an activity affects its weighting.

An Extra credit item will be identified in the **Gradebook setup** and the **User View** with a + sign to the right of the Maximum Grade.

In the scenario above, everything is weighted as **20** or **.2**. The extra credit assignment could also contribute 20% to the course total (to a max of 100%) if you gave it equal weighting. You can make the extra assignment contribute less (or even more!).

Extra Credit Weighting:	Possible percentage contributed to total:
20 or .2	20%
10 or .1	10%
5 or .25	5%

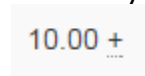

How to Give Extra Credit for a Gradebook Assessment

Sometimes we have given an assessment that does not adequately reflect students' skills and academic development. We may decide to give students an opportunity to increase their marks for that particular assessment only. When this happens, we need to create a category that houses the assessment with the extra credit activity. Using the scenario above, a course with 5 assignments valued at 20% each, we may follow these steps to give extra credit for Assignment #5.

1. Create a category called Assignment 5.
2. Put the Assignment 5 in the category.
3. Give the category a weighing of 20.
4. Set the aggregation method for the category to Simple Weighted Mean or Mean of Grade.
5. Create the Extra Credit Assignment.
6. Whatever the assignment is out of will affect the category Assignment 5.

If the Assignment is out of 20 and the extra credit is out of 5, the students may increase their mark by 25% of the assignment mark; 5/20.

The extra credit item will now have a + sign to the right of the Max Grade, whether you use Mean of Grades (with Extra Credit) or Simple Mean of Grades. The + symbol indicates that it is extra credit.
