Overview of Grade Book

All the grades for each student in a course can be found in the course gradebook, or 'Grader report' in the **Navigation Pane**. Look for 'Grades', 5 rows down from the top.

The grader report collects items that have been graded from the various parts of Moodle that are assessed, and allows you to view and change them as well as sort them out into categories and calculate totals in various ways.

When you add an assessed item in a Moodle course, the gradebook automatically creates space for the grades it will produce and also adds the grades themselves as they are generated, either by the system or by you.

Orientation to Grade Book Pages (* Most frequently used Grade Book pages)

View

There are many different views or pages in Grade Book that support the variety of tasks you may want to do with the students' grades: viewing a specific student's course grades or a student's grade for multiple courses, searching for specific assignment marks, overriding grades or creating categories and items to mirror the Grade Book to your course outline. The following outlines each of these pages and their main usage.

*Grader Report

This is the default page when you link to the Grade Book. You can enter or override grades when you turn editing on (top right corner). The grades are highlighted yellow to show that grades have been adjusted manually.

Grade History

On this page you may search out one student's marks in a course or review all students' marks in an assignment, etc. Of course, you can find this data in the User Report or the Grader Report. You can also look at revised grades only, but these are highlighted for you in the Grader Report. If you had multiple graders for your course, this could be a great tool to compare how graders assessed assignments.

Outcomes Report

The outcomes report helps teachers monitor their students' progress using Outcomes, specific descriptions of what a student has demonstrated and understood at the completion of an activity or course. Each outcome is rated by some sort of scale. **This feature is not currently enabled.**

*Single View

Single view allows a course teacher to view either all the grades of one single student or a single grade item for all students. Grades may be excluded, or overridden and modified. It is also possible to bulk insert a grade, which might be useful, for example, if you wish to give the grade 0 to all students who did not submit work.

  NQC Test2	1.00 - 2.00	Pass		☒	☐

*User Report

The User Report is what the students view when they access Grade Book. There are many options to setting up the User Report. Once you get used to Grade book, you may want to experiment with the settings. Do you want the students to see their rank (how well they did compared to others in class) for each assignment? Generally, students see the breakdown of their marks and optional teacher comments.

Setup

*Grade Book Set-up

This is the first page in Grade Book you should view to set your Grade Book to match your Course Outline. On this page, one creates categories such as “Assignments, Tests, Participation Activities” and set weightings. Items that are not created automatically through Moodle Activities can be added. For instance, if you need an attendance mark or a participation mark, you may need to create these items.

Course Grade Settings

Course settings determine how the gradebook appears for all participants in the course. Until you gain some proficiency in using Grade Book, it is recommended you leave the default settings.

Preferences: Grader report

This page determines how you will see the Grader Report, Grade Books landing page by default. Until you gain some proficiency in using Grade Book, it is recommended you leave the default settings.

Setting up your Gradebook

The first step is to set up your Grade Book. Your Grade Book should be structured to mirror your Course Outline.

First Step: Setting Categories

Your course outline reviews how the student is assessed. Most often, these marks are grouped into categories: Assignments, Mid-terms, Quizzes, Participation. Setting up categories makes the Grade Book easy for the students to follow.

Adding Categories in the Gradebook

Follow these steps to group your activities into different categories.

1. Click on **Grades** in the Navigation pane, and then click on **Setup**.

Gradebook setup

2. Scroll **all the way** to the bottom of the screen.
3. To add a category for the different Moodle activities, click on "**Add category**"

4. Set up the Grade category (Aggregation, Value) and save. Please refer to the **Aggregation Method** charts at the end of this document for explanations of the different types of aggregations available in Moodle.

Grade Category Setting – CAUTION!

Aggregate Only Non-Empty Grades

In Moodle's Gradebook, non-empty grades are items that have been assigned a mark for an individual student. Empty grades indicate where a student has missed a Gradebook entry (for instance, by not yet submitting an assignment or completing a quiz).

The "Aggregate Only Non-Empty Grades" option is turned on by default. This means empty grades are not included as part of the calculation.

The following table will show the difference achieved when 'Aggregate Only Non-Empty Grades Turned On' is selected:

	Assignment (30%)	Midterm (30%)	Final (40%)	Course Total
With Aggregate Only Non-Empty Grades Turned On	75	65	<i>Empty (will ignore in calculations)</i>	70
Aggregate Non-Empty Grades Turned Off	75	65	<i>Empty (will treat as a zero)</i>	42

From the example above, you can see that the two options can have a significant impact on a student's final mark. Alternatively, you may also choose to put a zero in the Final column so the column would not be empty. (This is similar to how marks must be entered in PeopleSoft.)

To check or adjust the setting, follow these steps:

1. For the course Category (if you are not already in the settings for the category), select the Edit> Edit Settings.
3. Press on **Show More**.
4. Ensure the box is checked for **Exclude Empty Grades**.

The screenshot shows the 'Grade category' settings in Moodle. The 'Category name' field contains 'Assignments'. The 'Aggregation' dropdown is set to 'Mean of grades'. The 'Exclude empty grades' checkbox is checked, and an orange arrow points to it from the right. The 'Drop the lowest' field is set to '0'.

▼ **Grade category**

Category name ⓘ Assignments

Aggregation ⓘ Mean of grades

☒ Exclude empty grades ⓘ

Drop the lowest ⓘ 0

5. Scroll down and click **Save changes**.

Moving items into a category

The best practice is to have your Grade Book categories set up before entering assignments and quizzes. When you are editing the assignment/quiz settings you can choose what category this activity is in under the section Grades. If you have not done this, items will appear in Grade Book in the order that you have created them. It will be necessary to move the assignments/quizzes to the appropriate categories.

Steps:

1. Add the Assignments to the new **Assignments** category by clicking on the *Move* button.

2. A new page will appear. Choose the box that reflects the appropriate location.

3. Click **Save**.

NOTE: If you are moving several items into a category, there is a faster method:

1. Click the checkboxes on the right of the activities you'd like to move into a category:

Name	Weights ?	Max grade	Actions	Select
Example Course 101	-		Edit ▼	All / None
Assignment 1	1.0	Pass (2)	Edit ▼	☒
Assignment 2	1.0	100.00	Edit ▼	☒
Assignment 3	1.0	100.00	Edit ▼	☒

2. Scroll down to the bottom of Gradebook Setup and select the Category you'd like to move these activities to:

Creating New Items

Not all assignments will be completed within Moodle.

Examples:

- Students went on a field trip and were given five marks for attending.
- Students participated in Guided Practice or CIA Exams.

Follow these steps to allocate a mark for an assignment that was completed outside Moodle.

1. Scroll **all the way** to the bottom of Gradebook setup.
2. To add a grade item to the Gradebook, click on *Add grade item*.

3. Enter an appropriate name for the new item. You can also select the grade type (eg. value or scale), change the maximum or minimum grade, hide the item from student view, and lock the item so that grades cannot be changed.

▼ **Grade item**

Item name	Class Participation
Grade type	Value
Scale	Use no scale
Maximum grade	100.00
Minimum grade	0.00
☐ Hidden	
☐ Locked	

[Show more...](#)

4. **Save** the changes.

Note: The 'Locked' feature is useful if there are several instructors in a course with editing privileges. One instructor can enter the grades and 'lock' them so other instructors cannot edit the grades afterwards. If you select the 'Locked' feature **before** students have completed the activity, any grades you enter will not be counted when overall grades are calculated, as Moodle will disregard any changes for that grade item. It is best to leave this option unselected until after the grades have been entered or overall grades will be calculated incorrectly.

Adding Marks

Most marks should be entered by clicking on the assessment tool (assignment or quiz), or they will be **entered** automatically.

For example, you can mark an assignment by clicking on the assignment and then choosing View/grade, all submissions. Under the Grade column, click on the pencil to edit an individual student mark. For each individual assignment, you can add a mark, comments, and a feedback file.

On occasion, you may need to manually override marks or enter a column of marks for an assignment that was done outside Moodle.

Examples:

- A student did not participate in a group assignment and therefore will earn a lower mark than the rest of the group.
- Students need a participation mark for an activity conducted outside Moodle, such as a participation mark for a field trip.

If you need to change a mark for a student:

1. Go to the Gradebook by selecting 'Grades' in the Navigation pane.
2. Click the Turn editing on button. (top right)
3. Make changes as necessary to the student marks.
4. Click on Update at the bottom of the gradebook.

Creating Final Marks

Before you calculate final marks, it is important to understand the different aggregation methods used by Moodle for calculated marks. See next pages.

<u>Aggregation Method</u>	<u>Description</u>	<u>Example</u>
Mean of grades	Each graded item is first converted to a percentage. The overall grade is then a simple average of these percentage values. Each item (regardless of how many points it is worth) has the same weight.	Quiz 1 is out of 5. Quiz 2 is out of 10. Quiz 3 is out of 20. With "mean of grades," each quiz makes up the same amount (1/3 of the student's grade).
Simple weighted mean of grades	Similar to "Weighted mean of grades," with the difference that the weight for each grade item is determined by its maximum (e.g., a 100-point assignment has a weight of 100, an 8-point assignment has a weight of 8.) The score for each grade item is multiplied by its total point value. The resultant values are then added together and divided by the total point sum of all grade items.	Quiz 1 is out of 10. Quiz 2 is out of 20. With "simple weighted mean," the more points an activity is "out of," the more it affects the grade. In this case, Quiz 2 will affect the grade twice as much as Quiz 1.
Weighted mean of grades	Each grade item is assigned a weight and this weight is used to determine the importance of each item in the overall mean. The score for each grade item is multiplied by its corresponding weight. The resultant values for each grade item are then added together and divided by the sum of all weights.	Quiz 1 is out of 10. Quiz 2 is out of 20. With "weighted mean," the above numbers do not matter: you decide the weight of each item yourself. Maximum control!
Median of grades	The overall grade is the middle grade (or the mean of the two middle grades) when the grades are normalized and arranged in numeric order.	With "median," only one grade matters: the "middle of the pack" grade. All the others are ignored. (If there are two middle grades, Moodle will "split the difference.")
Lowest grade	The overall grade is the lowest grade, after normalization.	The worst grade is kept, the others ignored. (You might use this in a firearms safety course, or a parachute packing course, where one substandard performance can fail a student.)
Highest grade	The overall grade is the highest grade, after normalization.	The best grade is kept, the others ignored. (Use this to encourage review and persistent practice.)
Mode of grades	The overall grade is the grade that occurs most frequently after normalization.	The grade you got most often is kept. (Gets the student's "most typical" performance. Not recommended unless the range of grades is quite narrow.)
Sum of grades	The scores for all grade items are added together and the result is divided by the sum of maximums for all grade items. When the "sum of grades" is used, a grade item can act as extra credit for the category. This means that the grade item's maximum grade will not be added	Sum of grades calculates a "running total" rather than an average. Quiz 1 is out of 10 Quiz 2 is out of 10 Quiz 3 is out of 10 Bonus quiz is out of 10 If the student gets 4 out of 10 on the first quiz, 6 out of 10 on the second quiz, and 8 out of ten on quiz 3, they have 18 marks out of 30 points, or 60%. If the student got 7 out of 10

	to the category total's maximum grade, but the item's grade will.	on the bonus quiz, then 7 more marks will be added to their total, but not the maximum grade for the quiz. In this case, the student would have 25 total marks, but the category is still out of 30 marks. The score for the student would be 25/30 points, or 83%.
--	---	---

Aggregation Method Calculations

Calculating using Mean of Grades

If each assessment has an equal weighting and you just require an average, use "mean of grades."

Example:

Assign 1 – 33.3%

Assign 2 – 33.3%

Assign 3 – 33.3%

1. Under *Grade Book Setup*, click on *Edit* and then *Edit Settings* next to the Course name or the Course Category you'd like to adjust and choose *Mean of grades*.

▼ **Grade category** —

Category name

Aggregation 

2. Click the 'Save Changes' button when done assigning aggregations or making other changes to the Gradebook.

Calculating using Weighted Grades

If each assessment item in your course has a different weight, follow these steps:

Example:

Assign 1 – 20%

Assign 2 – 30%

Assign 3 – 20%

Final Exam – 30%

1. Under *Grade Book Setup*, click on *Edit* and then *Edit Settings* and choose *Weighted mean of grades*.

2. Beside each item, enter in the appropriate weight.

Name	Weights ?	Max grade	Actions
Example Course 101	-	-	Edit ▼
Assignment 1	60.0	Pass (2)	Edit ▼
Assignment 2	40.0	100.00	Edit ▼
Course total Weighted mean of grades.		100.00	Edit ▼

Save changes

3. Click the 'Save Changes' button when done assigning aggregations or making other changes to the Gradebook.

How to Give Extra Credit

1. In the gradebook, click the Setup tab. **NOTE: to use this feature, you must be using Simple Weighted Mean of Grades OR Mean of Grades (with Extra Credit)**
2. Locate the item to be marked extra credit. Under the Actions column in that row, click Edit Settings.

Example Course 101	-	Edit ▼
Assignment 1	Pass (2)	Edit ▼
Assignment 2		
Course total Simple weighted mean of grades.	100.00	Edit ▼

3. **If you are using Simple Weighted Mean of Grades**, check the **Extra credit checkbox**. This method is recommended as it is easier, but note that the maximum grade of an activity affects its weighting.

▼ Parent category

☐ Extra credit ?

If you are using Mean of Grades (with Extra Credit), you will have to set the **Extra Credit Weighting**. If the activity is mandatory and not for extra credit, leave this weighting as 0. As for the weighting of the Extra Credit assignment(s), it is useful to determine beforehand what each (non-extra credit) assignment's equal weighting is worth, so you can set up the Extra Credit Weighting (which is not a weighting of 0) with that in mind.

For example, by using Mean of Grades, all assignments are weighted the same out of 100:

Assignment 1	20%
Assignment 2	20%
Assignment 3	20%
Assignment 4	20%
Assignment 5	20%
Total	100%

If we add an extra credit assignment, we also have to determine the weighting of it compared to the mandatory assignments. In the above example, everything is weighted as 20% (because it contributes 20% to the total of 100%). The extra credit assignment could also contribute 20% to the course total (to a max of 100%), or you can make it contribute less (or even more!). **The number you type into the Extra Credit weighting box will affect how much the extra credit is weighted compared to the rest.**

Here is how the extra credit weighting that you enter affects the weighting of the extra credit assignment (this is assuming each mandatory assignment is weighted 20% as above):

Extra Credit Weighting:	Percentage contributed to total:
1.0	20% (essentially, 1.0×20)
0.5	10%
0.25	5%
2.0	40%

To put this into context, let's say a learner got 75% overall on their mandatory assignments, and then got 100% on the extra credit assignment. This is how the student's grade would be affected:

Extra Credit Percentage Contributed to Final	Effect on Learner's grade:
20%	$75\% + 20\% = 95\%$ final grade
10%	$75\% + 10\% = 85\%$ final grade
5%	$75\% + 5\% = 80\%$ final grade
40%	$75\% + 40\% = 100\%$ final grade (no >100% grades allowed in Moodle).

ALERT!

The Extra credit option is **NOT** available when using the following aggregations:

- Weighted mean of grades
- Mean of grades (the regular one, not the one allowing for Extra Credit)

4. Save changes

The extra credit item will now have a + to the right of the Max Grade, whether you use Mean of Grades (with Extra Credit) or Simple Mean of Grades. The + symbol indicates that it is extra credit.

10.00 +
