

Journal Activity in Moodle

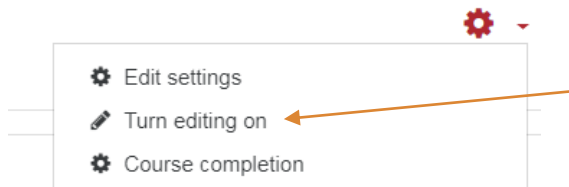

The Journal on Moodle can be treated the same as a journal in real life – a way for instructors to provide continuous feedback and for students to refine their entries over time in preparation for a summative assessment.

Contents

- Create Journal activity
- Marking Journal activity and providing feedback

Create Journal Activity

1. On your Moodle course main page, click the **Settings button** and then select **Turn editing on** from the dropdown menu.

2. In the section where you would like to include your Journal activity, click on **Add an activity or resource**.
3. In the popup menu, select **Journal**, and then click the **Add** button.

4. Give the journal a name and prompting questions

Journal name  Lab Journal

Journal question

For your post-lab journal entry, please answer the following:

1. What questions do you have following today's lab?
2. What have you learned from the lab today?
3. Was there a specific moment during the lab that stuck with you afterwards? Why?

Days available Always open 

5. Set the number of days that the journal will be available. **It is recommended to leave this setting as 'Always open'. The number of days available is in relation to the course start date, NOT the number of days available after you have created the activity.** If you would like to restrict the amount of time the journal activity is available to students, you also have the **Restrict access** option available.
6. In the **Grade** section, set how the journal will be graded and the category where it will be placed in the gradebook.

Grade to pass 

7. When you are finished, click on **Save and return to course**.

Marking Journal activity and providing feedback

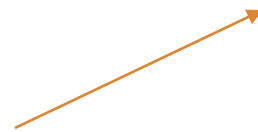

1. Click on the Journal activity.
2. In the top right hand side of the Journal, underneath the **Return to course** button, click on the **View __ journal entries** link.

Lab Journal

For your post-lab journal entry, please answer the following:

1. What questions do you have following today's lab?
2. What have you learned from the lab today?
3. Was there a specific moment during the lab that stuck with you afterwards? Why?

[View 1 journal entries](#)

[Start or edit my journal entry](#)

You have not started this journal yet

3. You will find a list of all the students and their journal entries (if they have submitted them). In the feedback section, click on the dropdown menu to assign a grade, and then type your feedback in the box below. **NOTE:** you will not be able to attach files or format your text in this box, as it is a plain text box.

1. I was wondering if all mammalian hearts are the same, except maybe the size. Are there any mammals that have only 3 chambers, for example?
2. I learned how thick the left ventricle is! It makes sense too because it is responsible for pumping blood to the entire body. The right ventricle is thinner, but it only pumps to the lungs - they are right next to the heart so the force needed to pump can be lower.
3. When I realised that this heart was the same size and configuration as a human heart - same number of chambers, same veins, same arteries too. To think that this thing has to pump all the way down to my feet as well as my head just puts things in perspective for me.

Feedback: No grade... ▾

4. When you are finished, click on **Save all my feedback.**
