

Overview Database

The database activity module enables participants to create, maintain and search a collection of entries (i.e. records). The structure of the entries is defined by the teacher as a number of fields. Field types include checkbox, radio buttons, dropdown menu, text area, URL, picture and uploaded file.

The visual layout of information when listing, viewing or editing database entries may be controlled by database templates. Database activities may be shared between courses as presets and a teacher may also import and export database entries.

If the database auto-linking filter is enabled, any entries in a database will be automatically linked to where the words or phrases appear within the course.

A teacher can allow comments on entries. Teachers or students can also rate entries (peer evaluation). Ratings can be aggregated to form a final grade which is recorded in the gradebook.

Setting up the Data Base

1. Turn editing on.
2. Add an activity or a resource.
3. Give a concrete name.
4. Description. (Instructions)
5. Entries

Approval required: Students need your approval before they can enter into the database.

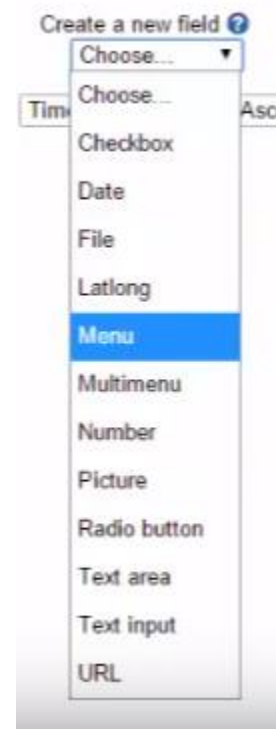

Allow comments in entries: Students are able to comment on other entries.

Entries required before viewing: Number of entries a student needs to have before they can view the others. (set at least 1)

Maximum number of entries: Even if you want the student just to do one entry, set this at two so they can go back and edit.

6. Availability (usually no date unless it is a marked activity).
7. Restrict Access (if you have more than one class using the Moodle course site use grouping).
8. Activity Completion keeps the student on track.

You're half way to setting up your Database. Now you need to set what the database will look like by setting up fields.

You can have as many fields as you would like.

Checkbox: list of items; students can check as many as they would like.

 Horror ☐ Romance ☐ Comedy ☐ Sci-fi'. A red arrow points from the preview to the text 'It will look like this.' below it."/>

Checkbox field

Field name: Movie Genre

Field description: type of movie

Options (one per line):
Horror
Romance
Comedy
Sci-fi

Save changes Cancel

Movie Genre: ☐ Horror ☐ Romance ☐ Comedy ☐ Sci-fi

It will look like this.

Date: enter date

Date field

Field name: Date of film

Field description: Date the film was released

Add Cancel

Date of film: 28 November 2011

File: drop a file

File field

Field name: Movie presentation

Field description: uploaded presentation

Maximum size: 30MB

Add Cancel

Movie presentation: Choose a file... Maximum size for new files: 30MB No files attached

Latlong: put in latitude and longitude and link it to a Google map; doing so will pull up that specific location.

Latitude/longitude field

Field name:

Field description:

Link-out services to display:

- Google Maps
- Google Earth
- Geabios
- OpenStreetMap
- Multimap

How to label items in KML files: (Google Earth)

Movie location:

Latitude: °N

Longitude: °E

Menu: choose from a list of items.

Field name:

Field description:

Options (one per line):

- Keanu Reeves
- Brad Pitt
- Gwyneth Paltrow
- Angeline Jolie

Main character:

Keanu Reeves

Brad Pitt

Gwyneth Paltrow

Angeline Jolie

Multimedia: choose one or more from a list of items.

Multiple-selection menu field

Field name: Sub-plots

Field description: type of subplots in movie

Options (one per line):
love interest
misunderstanding
mystery
comedy duo

Add Cancel

Sub-plots: love interest
misunderstanding
mystery
comedy duo

Numbers:

Number field

Field name: Length of movie

Field description: length of movie

Save changes Cancel

Length of movie:

Picture: upload a picture (instructor chooses the size in pixels).
