

Resources: File

The **File** allows you to store a file from your computer on the course home page, not in the “Legacy Course Files” area. If you delete a file resource, all files associated with this resource will be permanently deleted.

It is recommended you upload PDFs; these files open automatically on students’ computers. Sometimes you will want to upload a Word document, so students may work on editing the document.

Add a File Resource

There are three ways you can upload a file.

1) **Drag and drop a file** into the course page.

- Go to the course home page.
- Drag and drop a file into the course section.
- You may choose to turn editing on and edit the document’s **Name** and **Display** type.

2) Using **Add an activity or resource**

- Go to the course home page.
- Click on the **Turn editing on** button at the top right of the page.
- Click **Add an activity or resource**.
- Click the radio button next to **File** and click on the **Add** button.
The Adding a new File page will appear.
- Enter a **Name** and Description (optional).

The **Name** will be the title given to the activity on the Moodle course page. For easy student navigation. Choose a **Name** that is specific and clear as to what the resource is. The **Description**

is for your reference unless you check the box below the Description: **Display description on course page**. Only choose this option if it is necessary. This clutters the home page of your course.

Display description on course page ☐
?

f. Drag and drop a file in the content box.

g. Click **Appearance>Display** type. Choose one of the following:

Automatic – Moodle will choose display option based on file type.

Embed - The file is displayed within the page below the navigation bar together with the file description and any blocks.

Force download - The user is prompted to download the file.

Open - Only the file is displayed in the browser window.

**In pop-up - The file is displayed in a new browser window without menus or an address bar.

** Recommended. When the student closes the file, they do not close Moodle.

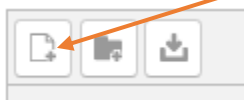

h. Select additional options.

i. Click on the **Save and return to course** or **Save and display** button.

3) Using a **file picker**.

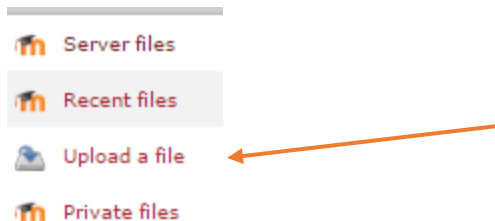

a. Upload a file from **Add an activity or resource**. (See #1 to 5 above)

b. The File picker window will appear.

c. Select **Upload a file** icon on the left in the File picker.

d. Click on **Upload a file** to choose a file from your computer.

- e. Navigate through your computer files. Select a file to upload, and click **Open**.
- f. Click on the **Upload** this file button.
- g. See g-i above.

Edit Settings after You Have Uploaded a File

1. Go to the course home page.
2. Click on the **Turn editing on** button.
3. Click **Edit** next to the **File** resource.
4. Click **Edit settings**.

Delete a File Resource

5. Go to the course home page.
6. Click on the **Turn editing on** button.
7. Click **Edit** next to the **File** resource.
8. Click **Delete**.

Notes:

- You may notice that you can add multiple files when you add a file, but only one will show up. There are instances where you might want to upload "hidden" files, for example, if you were uploading a web page with embedded files (you would only want the web page to be visible as a file). If you are in this situation, make sure you set the primary file as the default file by clicking the file and the **Set** main file buttons.

- If you wish to upload multiple files and have them all visible to students, you should either upload the files individually or use the **Folder** resource.

For additional information, see the [Working with Files Moodle Docs](#) or contact Moodle Help.
